NOTEBOOK

Example notebook

The notebook template applied to the identification counts of the systematic review

Telmo Miguel-Medina · 14 October 2026 · docs/templates

Shows the template with real data: it reads the identification counts of T0.2 and summarises how many records each source contributes and how many are removed.

- **Input:** `../../../WP0-state-of-the-art/T0.2-search-and-deduplication/counts.csv`.
- **Output:** none; it only displays tables.
- **To re-run:** run all cells.
- **Environment:** the repository `.venv` (see `CONTRIBUTING.md`).

1. Load

```
counts = pd.read_csv(INPUT)
counts["item"] = counts["item"].str.strip()
table(counts)
```

item	records
Scopus	1380
Web of Science	801
IEEE Xplore X1	545
IEEE Xplore X2	488
Tracking: backward citations	0
Tracking: forward citations	692
Tracking: author	422
Total identified	4328
Removed: no authors (front matter, proceedings, standards)	74
Removed: document type (tracking)	7
Removed: duplicates	1615
Corpus for screening	2632
of which, from the database searches	1882
of which, from tracking only	750

2. Analysis

Records contributed by each source, as a share of the total identified.

```
total = counts.loc[counts["item"] == "Total identified", "records"].item()
sources = counts[counts["item"].str.match(r"Scopus|Web of Science|IEEE|Tracking")].copy()
sources["share"] = (sources["records"] / total).round(3)
table(sources, bar="records")
```

item	records	share
Scopus	1380	0.319
Web of Science	801	0.185
IEEE Xplore X1	545	0.126
IEEE Xplore X2	488	0.113
Tracking: backward citations	0	0.000
Tracking: forward citations	692	0.160
Tracking: author	422	0.098

Records removed before screening, by reason.

```
removed = counts[counts["item"].str.startswith("Removed")].copy()
removed["reason"] = removed["item"].str.replace("Removed: ", "")
print(f"Removed: {removed['records'].sum()} of {total} ({removed['records'].sum() /
↪  total:.0%})")
table(removed[["reason", "records"]], bar="records")
```

```
Removed: 1696 of 4328 (39%)
```

reason	records
no authors (front matter, proceedings, standards)	74
document type (tracking)	7
duplicates	1615

Conclusions and notes

- **Scopus is the largest source**, with 1380 of the 4328 records identified.
- **Duplicates are the main reason for removal**: 1615 records, well above the 74 without authors and the 7 removed by document type.
